

University of Southern California
SCHOOL OF PHARMACY

Ph.D. in Clinical and Experimental Therapeutics

Program Learning Objectives

The purpose of the USC School of Pharmacy **Ph.D. program in Clinical and Experimental Therapeutics** is to prepare graduates to execute original, high-level research in the discipline specific to the graduate's area of emphasis, especially in the investigation of disease processes, drug development and the efficacy and toxicity of therapeutic regimens. Graduates might be employed at leading research universities, in industry, government or in any research-centric arena.

Doctoral students enrolled in the program will be able to:

- Achieve and demonstrate deep methodological skill and an understanding of contemporary research in their respective area of emphasis.
- Implement innovative research practices under guidance of their faculty advisor and in concert with their research team.
- Demonstrate understanding and applying contemporary research in their respective area of emphasis to industry contexts and be able to engage in innovative practices informed by such research pertinent to clinical translational research and their area of emphasis in diverse contexts.
- Demonstrate understanding of leading research teams in their respective area of emphasis by mentoring and providing teaching assistance to Pharm.D. students, master's students and fellow Ph.D. students who are less advanced than they are in their respective doctoral programs.
- Launch an independent research agenda in their respective area of emphasis under the guidance of their faculty advisor.
- Complete and orally defend an acceptable dissertation based on original investigation and supervised by their dissertation committee showing mastery of an area of emphasis within clinical translational research, capacity for independent research, and a scholarly result.
